

BIOSAFETY CABINET

Class II B2 Biosafety Cabinets equipped with a downflow air taken from the laboratory.

No downflow air is taken from the cabinet exhaust air.

All downflow and inflow air is exhausted through a HEPA filter without recirculation in the cabinet.

All contaminated ducts and plenums are maintained at negative pressure.

The B2 type Biosafety Cabinet may be used for work with volatile toxic chemicals and radionuclides as required in microbiological studies.

ADVANTAGES:

Remote control for easy operation. The operator doesn't need to contact the biological safety cabinet directly, it is useful for the cross contamination prevention.

Foot Switch for the front panel height adjustment.

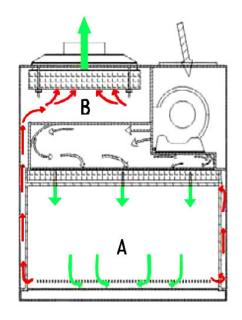

Work area surrounded by negative pressure.
